Jobinator:
AI Assisted Career Assistance

By: Brian, Ethan, Kevin, Mohammed

Project Overview

Jobinator is an AI-Powered Career Helper

MISSION

- Help users create, improve, and tailor professional career documents with AI assistance.

Technology

- Web-based platform using AI content generation, secure accounts, document storage, and export tools.

Target Users

- Students, job seekers, interns, and professionals who need stronger resumes, CVs, or LinkedIn profiles.

Functional Requirements

Document Creation And Management

- Allows Users to work on their resume, CV, or LinkedIn

Job-Specific Tailoring

- Allow users to target their documents for a position

Document Editing

- Allows users to edit and store their documents

User Privacy

- Not collecting data if not necessary

Non-Functional Requirements

Performance

Quick standard actions, acceptable waiting period for AI and exports.

Usability

Guided workflows, consistent labels, and editable AI suggestions.

Reliability

Preserve drafts, support retry after failures, avoid broken sessions.

Security

Secure authentication, permission handling, restricted admin access.

Scalability

Support growing users, documents, and AI requests without redesign.

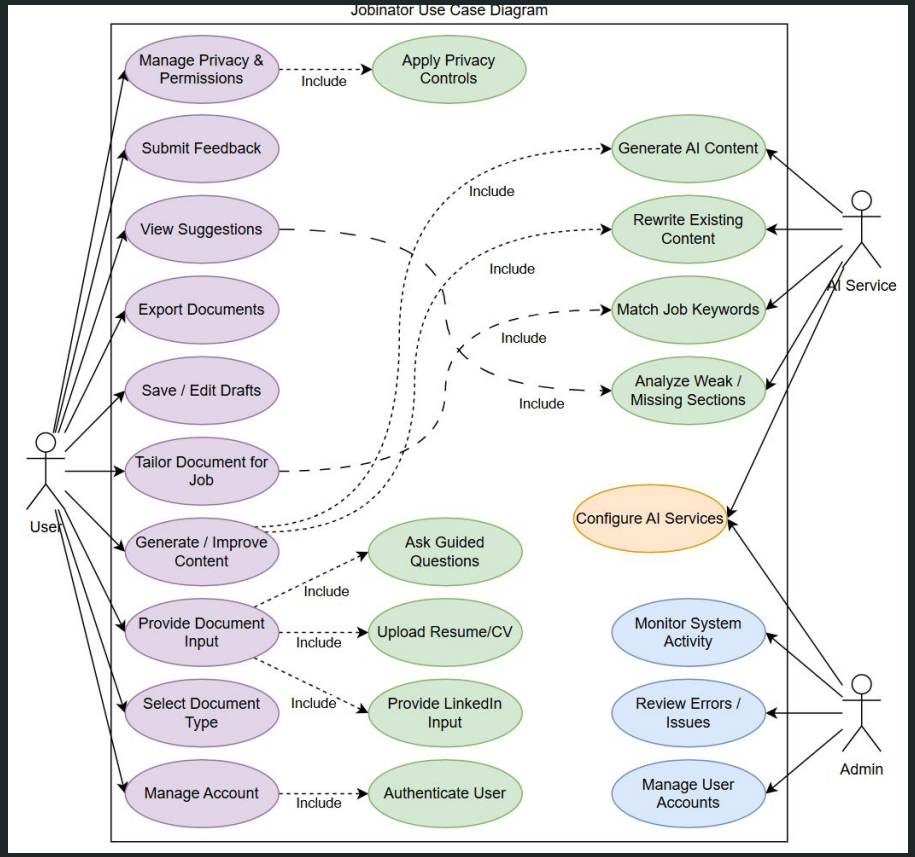

Accessibility

Readable labels, keyboard friendly navigation sufficient contrast.

Compatibility

Modern browsers, responsive desktop/mobile access. PDF/DOCX outputs

Use Case Diagram

Risk Assessment

AI Output Quality

Generic or inaccurate suggestions can weaken documents.

Upload Parsing Issues

Formatting can break during import/export.

AI Service Outage

Generation and tailoring may slow down or fail.

Privacy Exposure

Career data can include personal information.

Incomplete Input

Weak inputs produce weak outputs.

Device Differences

Layouts or uploads may behave inconsistently.

Tools & Techniques

Frontend

React.js, TypeScript, responsive UI components.

Database and Storage

Structured database + file storage for drafts and uploads.

Document Processing

PDF/DOCX import, parsing, preview, and export utilities.

Backend

Node.js / Express API, sessions, request routing.

AI/NLP

External LLM service for generation, rewriting, and tailoring.

Security

HTTPS/TLS, authentication, permissions, admin restrictions.
